SB2
USB Sound Card

With the SB2, we have made our tried and trusted sound card even better. The sound card allows headphones to be easily connected to almost any computer and laptop, and the downloadable software allows personal settings for the right audio experience. During the game, the large buttons make it quick and easy to adjust the volume or, if desired, to mute the microphone or turn off the headphone audio. All this is complemented with a TRRS connection for the headset.

The Ace Card for the Headset

The large buttons enable an easy operation while gaming. Muting the microphone and regulating the volume are very easy to do. In addition to a 3.5 mm port for the microphone, there is also a 3.5 mm TRRS port for headsets to provide for a wide-ranging compatibility.

VIRTUAL 7.1 SOUND

Including 10-Band Equalizer

Using the software that can be downloaded from the Sharkoon website, the audio can be tailored even further to suit personal requirements for listening enjoyment.

Apart from being able to use a 10-band equalizer, the listening experience can be further widened thanks to the virtual 7.1 sound. 12 preset equalizer modes enable the easy modification according to sound genres. Personal audio adjustments can also be saved and later selected as desired.
