

SKILLER
SGS30
GAMING CHAIR

The SKILLER SGS30 is undoubtedly a versatile gaming chair in many ways. Its particularly thick upholstery as well as the headrest and lumbar cushions made of memory foam mean extraordinary comfort for the user, even after hours of sitting. The chair demonstrates its steadfastness with its robust five-star base and gas lift piston, while its adjustable backrest is just what is needed for complete relaxation. A truly multitasking chair.

For a Stylish Appearance

The elegant look of the synthetic leather with a choice of four different accent colors, allows the SGS30 to present itself with an air of exclusiveness. With its distinguished appearance, not only can the chair be stylishly integrated into the gaming setup, but it can also be used for cutting a particularly fine figure during video conferences.

Especially Comfy

Comfortable sitting has top priority with the SGS30: The thick padding of the chair allows for hours of continual sitting, while the large seat base has raised sides to complete the feeling of comfiness. The headrest and lumbar cushions are filled with memory foam and always keep their form whatever the demands of everyday use. The armrests can be adjusted in height and direction, allowing the chair to be adjusted according to personal ergonomic needs.

Built to be Robust

The frame construction of the SGS30 is made of steel, while the five-star base is made of aluminum. Together they form the framework for a gaming chair that solidly holds its ground, always withstanding the most impulsive of movements. The five 75 mm wheels with lock function provide the necessary support when the going gets frantic, carrying every movement that comes their way while still staying under control. At the same time, they offer full freedom of movement on almost any kind of surface.

Ideal for Relaxing

Thanks to an integrated tilt mechanism, the chair can also be tilted back up to 14°. The backrest can be reclined up to 165°, offering the possibility to lean right back and, every now and then, to take a well-deserved rest. Whether it's between gaming sessions or after work, the chair offers optimal possibilities for relaxing.

High Safety Standards

Thanks to its class-4 gas lift piston, the aluminum five-star base and the extremely resilient steel frame construction, the chair can support users with a weight of up to 130 kg or with a height of up to 185 cm.
