

# PUREWRITER TKL RGB

# PUREWRITER RGB

The PureWriter RGB is a keyboard for all occasions: Gamers will enjoy the steplessly adjustable RGB illumination as well as the essential gaming features. Prolific writers, on the other hand, will love the elegantly simple design, the compact dimensions, and, above all, the excellent typing feel of the ultra-flat keys. Moreover, the keyboard is especially light to carry and comes with two detachable cables with different lengths - and is thus ideally made for mobile use. For maximum user-friendliness, all the functions of the PureWriter RGB can be used without having to download any software.

## Features

### REACTIVE LOW-PROFILE SWITCHES FOR GAMERS AND WRITERS

The PureWriter RGB is equipped with ultra-flat keycaps which have a height of only 6.2 mm to support the ergonomic use of the keyboard. The incorporated red Kailh switches are optimally reactive, providing an advantage of milliseconds in hectic gaming situations thanks to a short distance of only 1.5 mm to the actuation point. As they are completely without feedback, gamers can sink undisturbed into the action of the game. The incorporated, innovative blue Kailh switches have a short distance of 1.5 mm to the actuation point and provide a detectable click and actuation point for fatigue-free work and a sensation which is pleasantly reminiscent of typing machines. The low profile of the keyboard provides ergonomic support for wrists and hands without the use of a palm rest.

### STEPLESSLY ADJUSTABLE RGB ILLUMINATION

The illumination of the PureWriter RGB can be selected as desired from an entire RGB spectrum of 16.8 million colors. Brightness and color tones are continuously variable without steps. There are four lighting profiles available, where personally chosen illumination settings can be saved for future use. And, if being a little more conspicuous is preferred to having a static illumination, then the keyboard offers a variety of preset lighting effects to choose from.

### TECHNICALLY GEARED FOR GAMING

With n-key rollover support, anti-ghosting keys and a polling rate of 1,000 hertz, the PureWriter RGB is not only suitable for prolific writers, but is also designed for gaming at an eSport level.

### AGELESS, ELEGANT DESIGN

The height is also as low as possible at only 23 mm with the supporting feet folded in. The top surface is made of aluminium alloy and provides a silver edge, framing the keyboard and completing the minimalist design with a touch of ageless elegance.

### READY TO USE, ANYWHERE

For more convenience of use, the keyboard is supplied with two detachable USB cables with different lengths. The 150 cm cable is suitable for connecting to conventional PCs, while the shorter 50 cm cable is ideal for use with laptops or notebooks. With an appropriate adapter, the PureWriter RGB can be quickly used On-the-Go with other devices such as smartphones.

## Specifications

Product Name	PureWriter RGB	PureWriter TKL RGB
